**(54) REGISTER MARK
RECORDING METHOD IN
PICTURE SCANNING AND
RECORDING DEVICE**

(57) Abstract:

PURPOSE: To execute the alignment with high accuracy by recording a cross-shaped register mark of one resolving edition, and other mark by negative type and a positive type, respectively, when recording the register mark by a color scanner.

CONSTITUTION: When outputting a signal to be recorded by coupling two kinds of line images, its signal and its inverted signal are outputted selectively, and a cross-shaped positive line image A and a cross-shaped negative line image A' are recorded. When matching and aligning the positive line image A and the negative line image A', failure of the matching state can be discriminated easily.
